# SGI® Adaptive Data Warehousing Solution

**SGI and Oracle are collaborating  
to provide solutions for  
complex decision support**

# Complex Data Warehouse Customer Challenges

**Perform complex  
analytics...**

**... on exponentially  
growing data sets**

**... from multiple data sources in  
real time**

# Complex Decision Support Market

*Huge Data, Highly Complex Analysis, Concurrent Mixed Workloads*

## Web 2.0 Companies

## Customer Insight

Telecommunications  
Companies

Airlines

## Fraud Detection

## Predictive Analytics

## Manufacturing

- Sales analysis
- Quality control
- Warranty analysis
- Supply chain management

## Government

Battlefield Intelligence

# Complex Decision Support Technology

## ***SGI and Oracle Have the Technology Required by Complex Decision Support Customers***

### **Business Imperatives**

- Greater customer insight
- Faster decision-making
- Multiple high-volume data sources
- More complex data analysis

### **IT Challenges**

- Service Levels
- Mixed workloads
- Efficiency
- Standardization
- CapEx and OpEx

### **Technology Needs**

- High I/O bandwidth
- Flexible growth
- Intensive analysis
- Large memory support
- Scaling for very large data sets
- Support for structured and unstructured data

***SGI and Oracle excel in delivering the technology required by complex decision support customers with industry-standard technology***

# Complex Decision Support Challenges

# Complex Decision Support Targets

## *SGI and Oracle Are Targeting the Complex Decision Support Market*

**sgi ...** brings decades of experience in high-performance, large-scale systems architecture

**sgi ...** is 100% committed to industry standards such as Intel and Linux

**ORACLE®** is the leading provider of data management solutions for data warehousing, with more than 40% market share

**ORACLE®** is addressing the rapidly expanding (market) customer requirements for larger data warehouses

**Jointly...**

**SGI and Oracle are targeting complex decision support customers, whose requirements extend beyond the needs of the traditional enterprise customer**

# Oracle® Optimized Warehouse Initiative

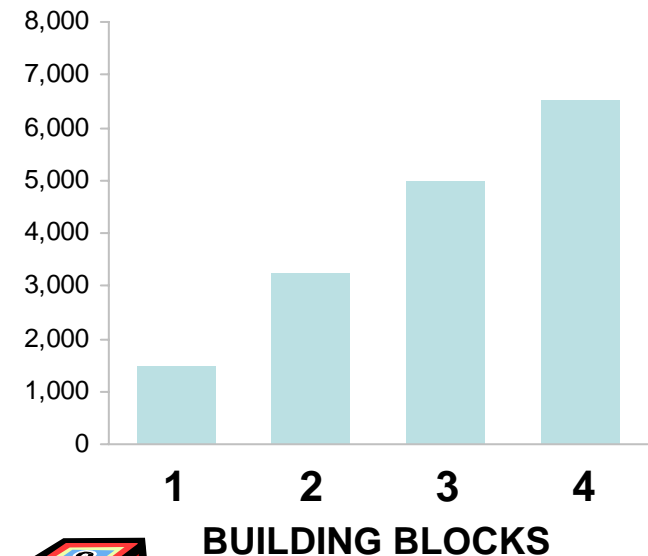

## Simplifies Deployment of Complex Data Warehouses

- Scalable systems, pre-integrated and pre-configured
- Ready to run out-of-the-box

### Benefits

- High performance
- Building-block approach
- Simple to buy
- Fast to implement
- Easy to maintain

## Scalable Performance

# Full Range of DW Solution Options

## Custom

- Flexibility for the most demanding data warehouse
- Benefits:
  - High performance
  - Unlimited scalability
  - Completely customizable
  - Industry-leading database and hardware

## Reference Configurations

- Documented best-practice configurations for data warehousing
- Benefits:
  - High performance
  - Simple to scale; modular building blocks
  - Industry-leading database and hardware
  - Available today with SGI

## Oracle Optimized Warehouse

- Scalable systems pre-installed and pre-configured: ready to run out-of-the-box
- Benefits:
  - High performance
  - Simple to buy
  - Fast to implement
  - To be launched at Oracle Open World

Pre-configured, Pre-installed, Validated

Flexibility

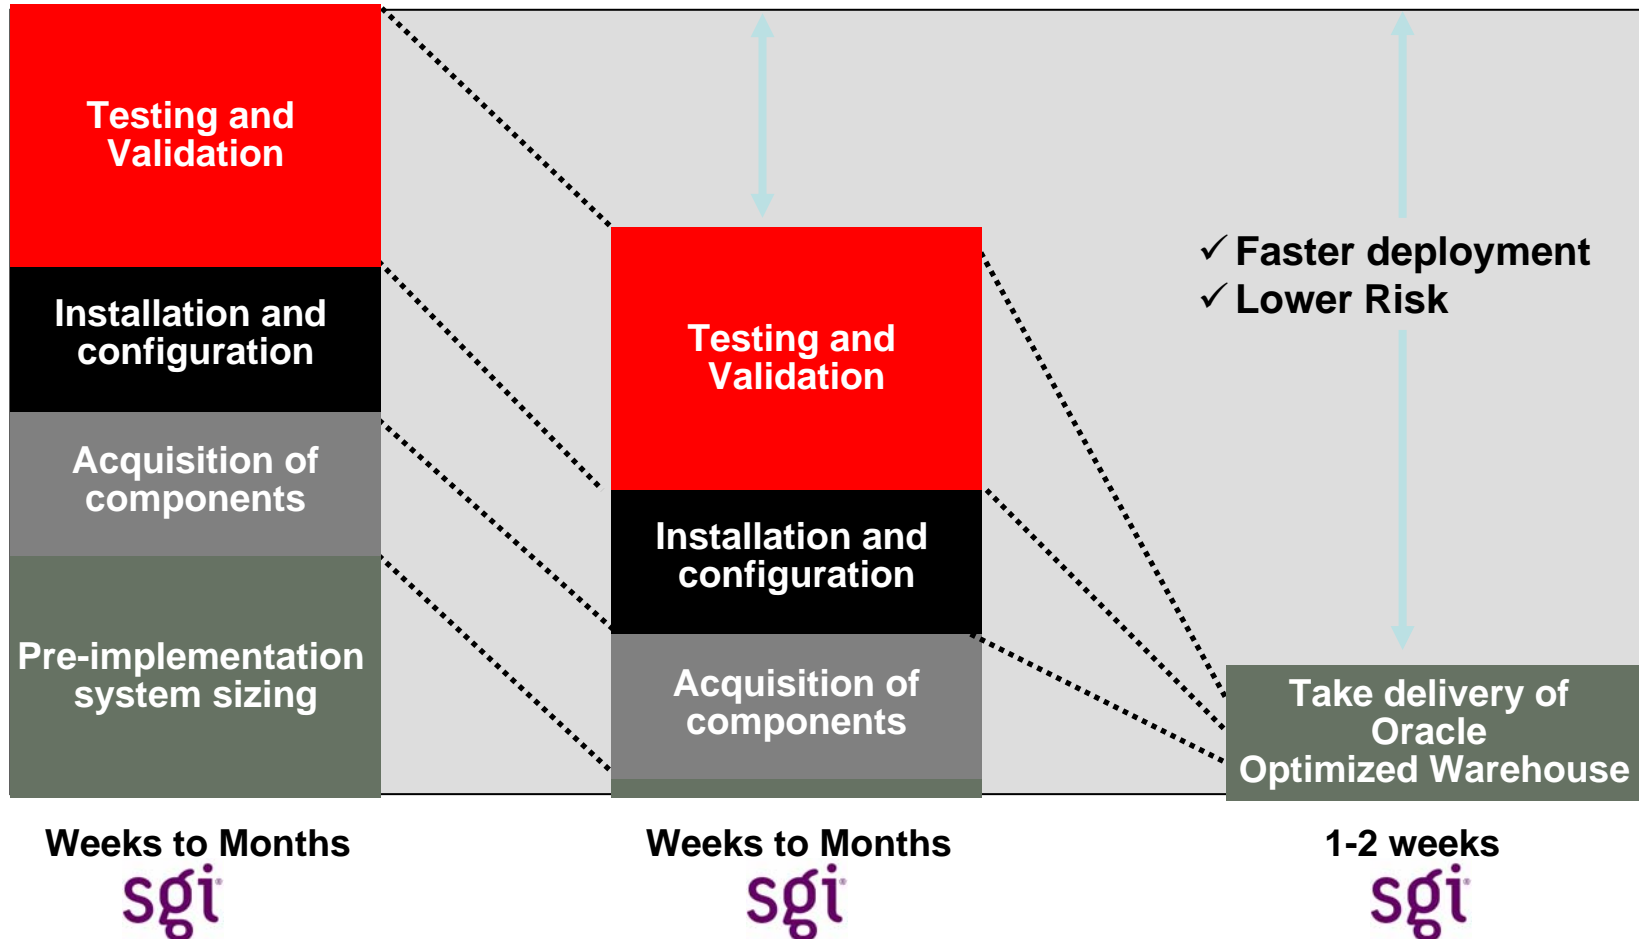

# Accelerate Implementations and Lower Risk

## SGI - Agile business partner

**Build from Scratch  
with Components**

**Reference  
Configurations**

**Oracle Optimized  
Warehouse**

# SGI® Adaptive Data Warehouse Solution

- ➔ **Outstanding price/performance:** Based on industry-standard technology
- ➔ **Multiple solution families:** 1TB to 300+TB configurations
- ➔ **Flexible architecture:** Scale-up and scale-out
- ➔ **Adaptable to changing business requirements:** No forklift upgrades
- ➔ **Easy to configure:** Predefined building blocks
- ➔ **Supports industry-leading database:** Oracle
- ➔ **Includes:** Server, storage, network switches, database, and services

# SGI® Adaptive Data Warehouse Solution

## *Outstanding Price/Performance*

*Leveraging the  
economics of industry-  
standard technology ...*

Processors

Linux  
Operating  
System

*... combined with  
innovative technology ...*

# Oracle Optimized Warehouse Initiative Configurations

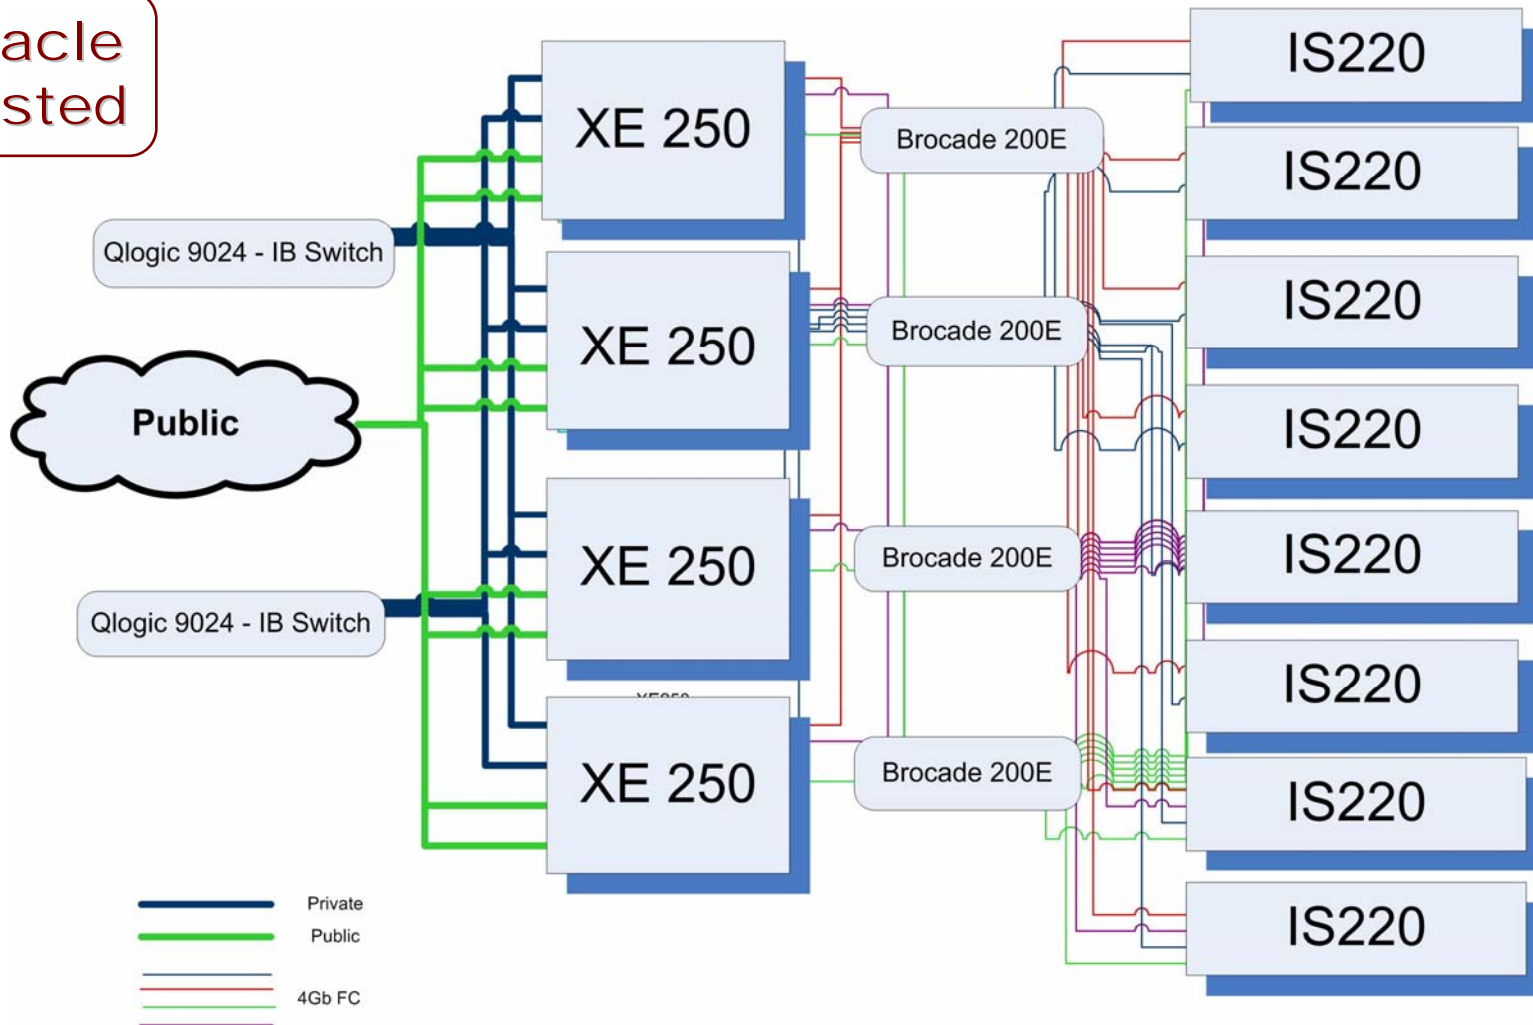

Fully tested OWI optimized and reference configurations in a broad range of performance and capacity categories

Configuration

# SGI 5 TB Optimized Performance OWI Configuration

Oracle  
Tested

# SGI OVI 5TB Performance Configuration

## Bandwidth Scaling

Oracle  
Tested

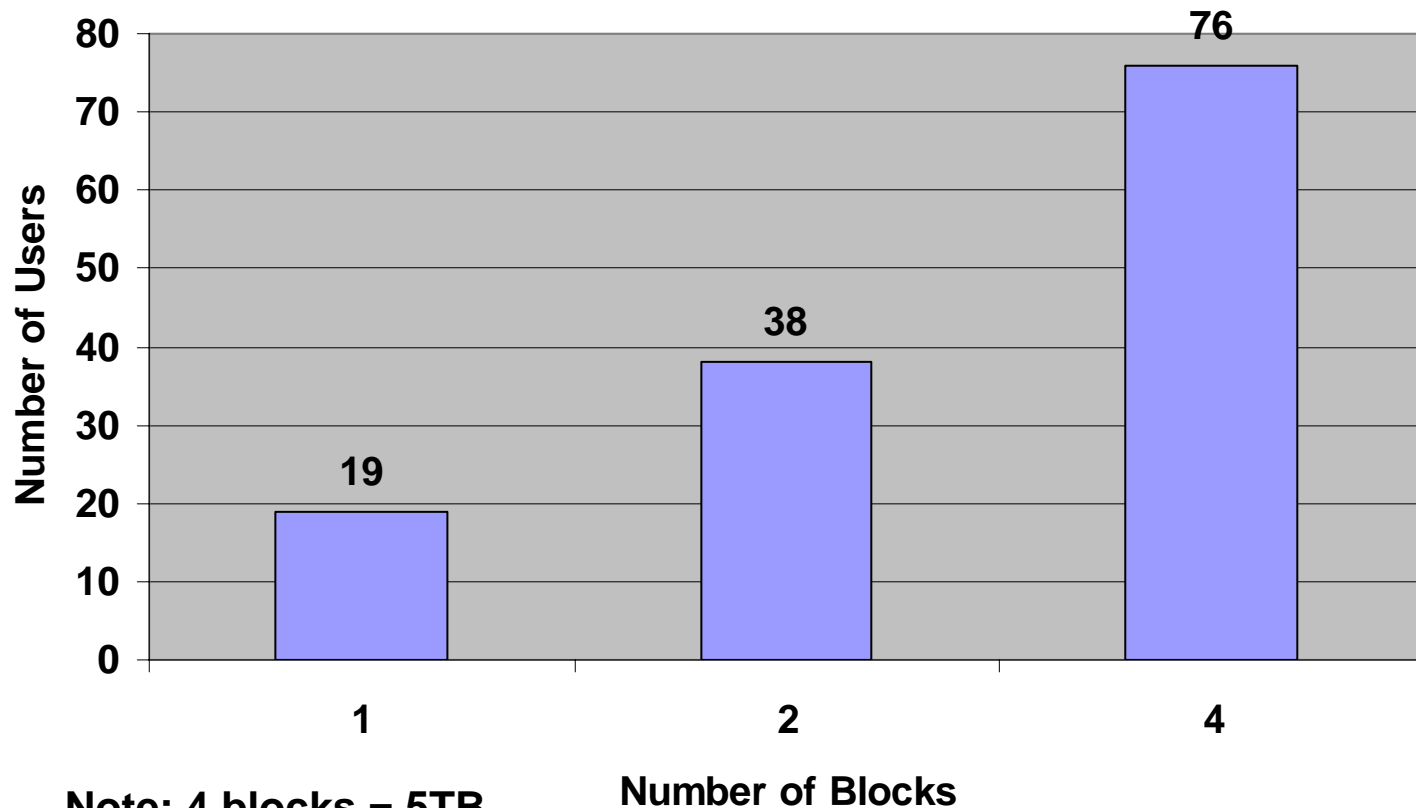

Aggregate I/O Bandwidth (GB/s)

# SGI OWI 5TB Configuration Scales Linearly with Additional Nodes

Oracle  
Tested

## Supported Users

# SGI® Adaptive Data Warehouse Solution

## *Systems Architecture Technology*

### Loosely Coupled to Tightly Coupled Architecture

#### ULTRA-LARGE

**100TB to 300TB**

- Scale-up and scale-out
- NUMALink systems architecture
- 24TB memory

#### LARGE

**5TB to 100TB**

- Large-scale SMP
- NUMALink systems architecture
- 864GB memory

#### MID-RANGE

**<25TB**

- Loosely coupled, scale-out
- IB interconnect

# SGI® Adaptive Data Warehouse Solution

## *Adaptability*

## *Simplified Expansion Without Sacrificing Flexibility*

### **Simplified Growth**

- Capacity growth by the addition of balanced building blocks
- Predefined reference configurations that scale into the hundreds of terabytes

### **Incremental Expansion**

- Upgrades are additive to existing infrastructure
- No forklift replacement

### **Huge expandability with NUMALink**

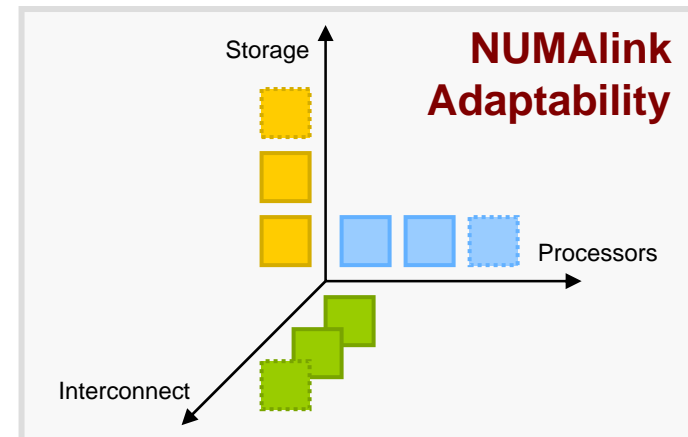

- Within a single processor and interconnect architecture
- CPU, memory, and I/O blades are all independently scalable
  - Thousands of processors
  - Terabytes of memory
- Independent scaling provides lower TCO and software licensing costs

### **Adaptability and Choice**

- Meet new workload processing, memory, and bandwidth requirements by adding blades

### **Data Warehouse Appliances**

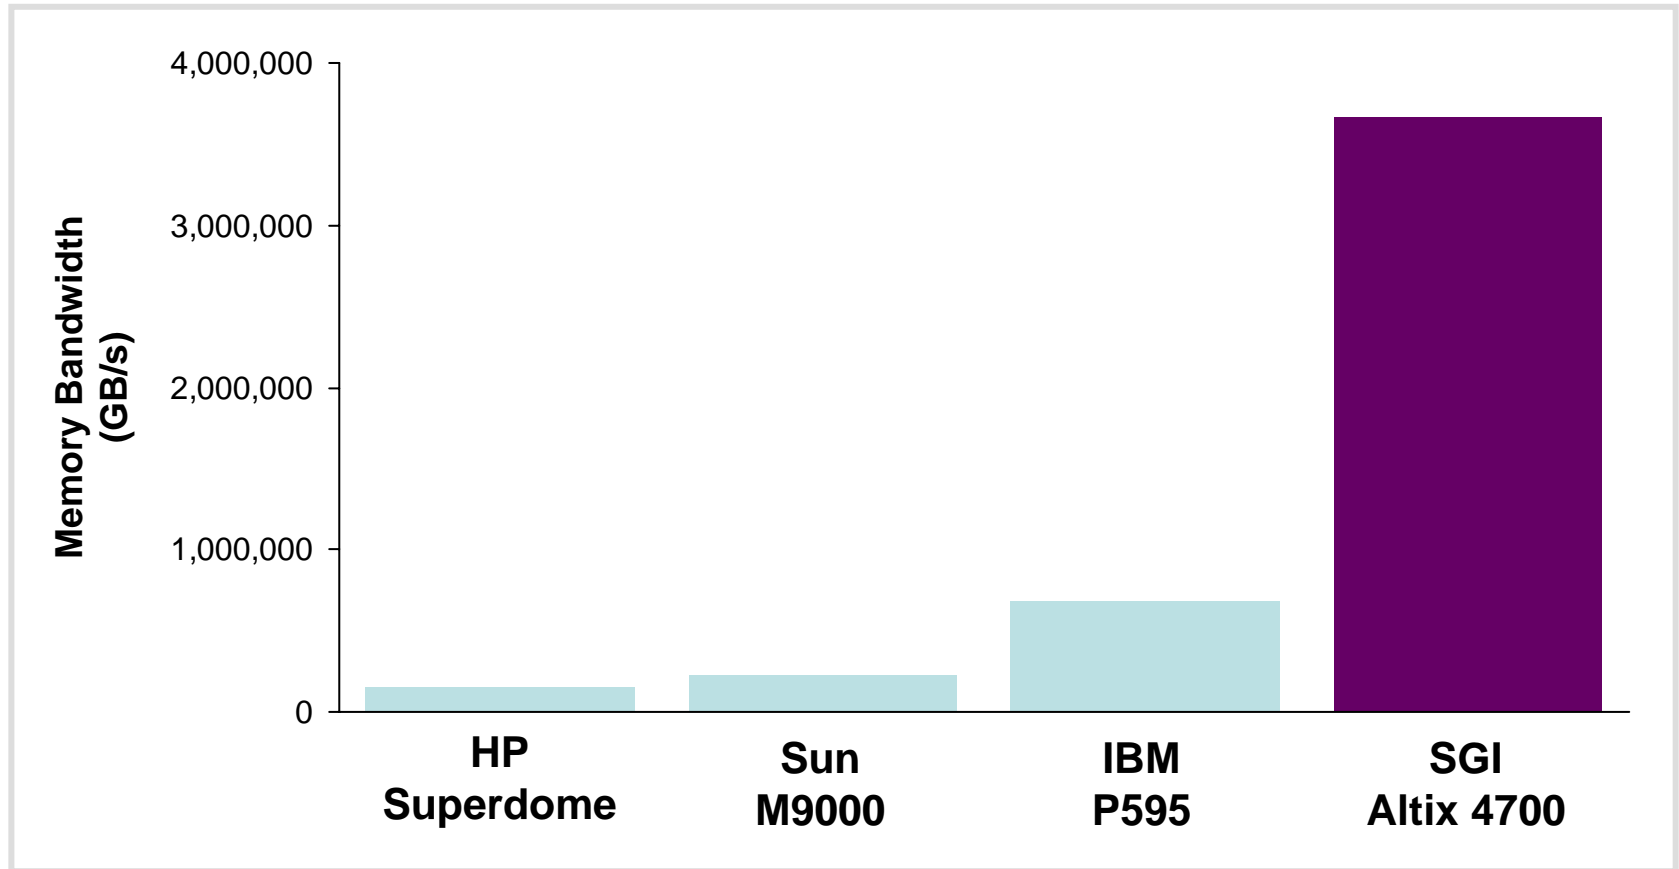

- Rigid, inflexible expansion
- Forklift upgrades
- Acceptable if all of your future needs look just like today's

# SGI® Adaptive Data Warehouse Solution

## *Shared Memory Bandwidth*

***SGI Delivers 5x Greater Memory Bandwidth\****

\*Based on Stream benchmark, 06/01/2008

# Konami Casino Management System – Data Warehousing for Real-Time Analytics

## Real-time Tracking and Data Mining with Oracle and SGI

- Real-time play tracking combined with incentives and promotions
- Performance to uniquely provide personalized responses and responses to free play incentives in real-time
- A single system tracks all customer game play across, tables, slots, and other venues, across multiple properties

## Transaction Rates that Rival Banks

- Casinos have as many as 3000 slot machines
- Transaction volumes as high as 34 million per day
- 24 X 7
- Oracle and SGI provide the ability to manage huge transaction volume and availability features within a single server
- Memory and I/O bandwidth enable tracking to the individual game level.

## Full Detail Data for Data Mining and Marketing Analysis

- Konami provides full player history across millions of players for data mining
- Konami captures 10X the detail data of competitors who can only provide detail data for 90 days
- Mixed OLAP and OLTP with Oracle database

## No Forced Architectural Transitions or Scaling Limits

- 500-3000 slots with same systems architecture vs. competitors need for different CPUs and server product lines

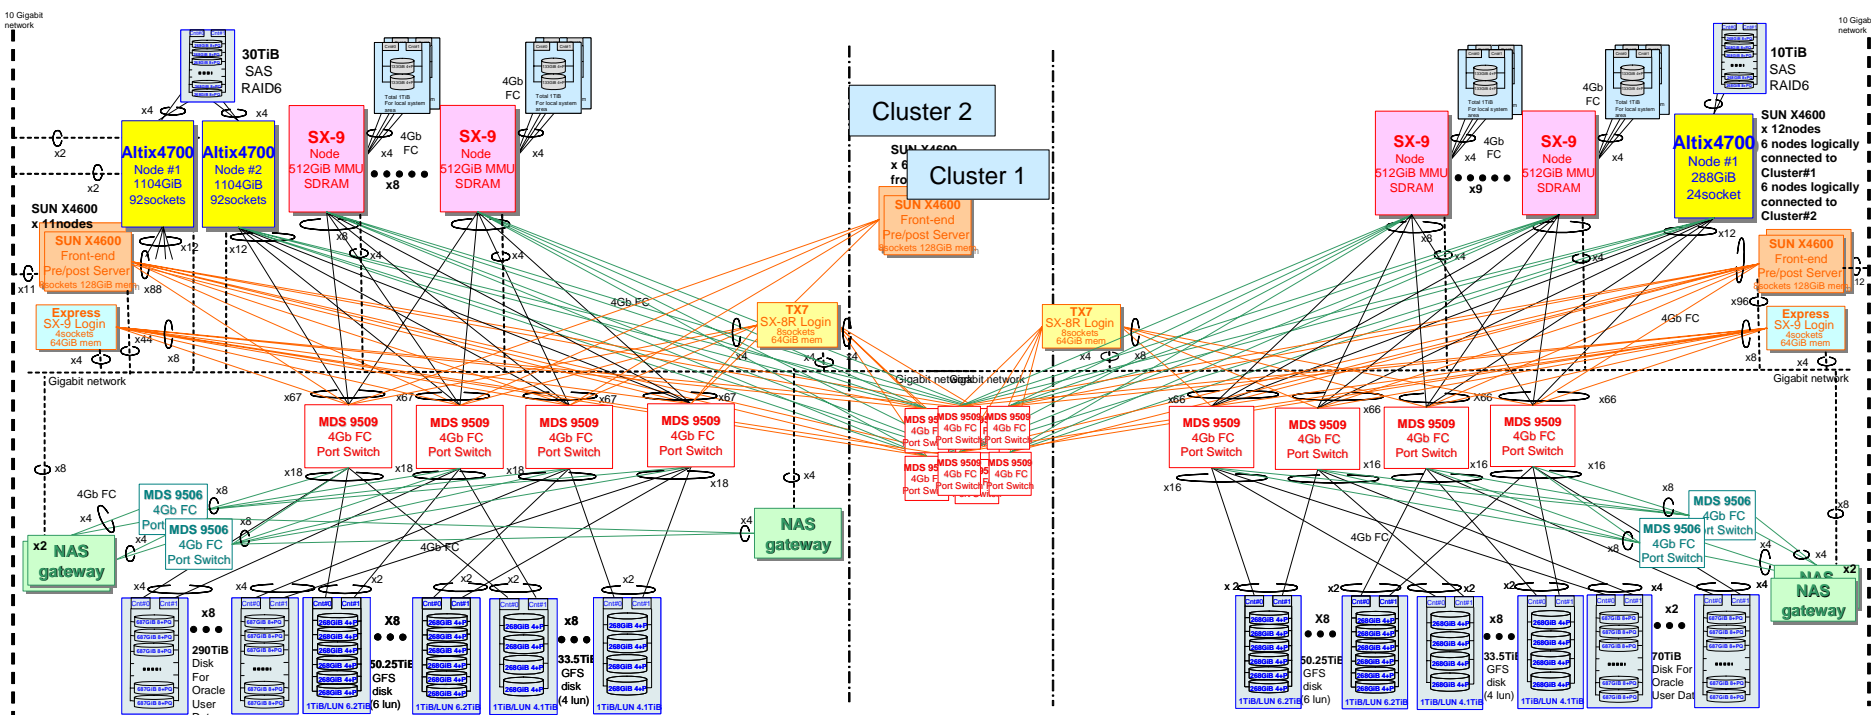

# DWD – SGI Adaptive Data Warehouse Solution Improves Advanced Weather Forecasting

- Total of 2.8TB of shared memory on five SGI Altix 4700 data base servers
- Total of 472 Intel Itanium cores
- Two SGI Altix 450 test servers
- 30TB Metadata in Oracle 10g Data Warehouse
- 300TB Disk-based unstructured data
- 1.5PB Tape-based unstructured data
- Advanced Ensemble Prediction System
  - Averages forecast outputs of several models from different centers
  - Enables forecast reliability estimates
- SQL queries to Metadata warehouse which retrieves additional unstructured data
- Planned 20X increase in extremely short-range forecasts
  - From 1 every 3 hours to 20 in every 3 hours
  - Data sets are less than 10 minutes old
  - 4GB of data in each forecast
  - Each forecast updates 800MB of metadata
- Metadata from eight databases
  - Measured values
  - Satellite images
  - Weather models
  - Numerical experiment data
  - Operational data

# DWD System Architecture

## MTU Aeroengines AG

### The Challenge

- Increase ROI, decrease TCO
- Consolidation of technical and enterprise computing resources
- Adoption of new open-standards-based platform

### The Solution

- 3+2 Altix® 350s (16p, 62GB)
- HDS 2x20TB

### The Benefits

- Fastest Oracle 10g performance
- Solid base for SAP
- Improved ROI 15-30%

*“SGI Altix gives us the fast performing consolidated platform for technical and transaction computing.”*

Norbert Diehl, CIO of MTU Aeroengines

# SGI® Adaptive Data Warehouse Solution

## *Competitive Differentiation*

- ➔ **The SGI Adaptive Data Warehouse solution is ideal for complex data warehousing**
  - SGI knows how to build high-performance, large-scale systems
  - Oracle is the leading provider of database technology for data warehouses
- ➔ **SGI has 25 years of expertise in designing large systems**
  - SGI builds thousands of core systems and multi-petabyte storage systems on a regular basis
- ➔ **SGI delivers faster query performance on industry-standard technology**
  - SGI Adaptive Data Warehouse solution delivers up to 5x higher memory bandwidth
  - SGI and Oracle both strongly support industry-standard technologies (Linux®, Intel® processors)
- ➔ **SGI offers a flexible architecture with lower TCO for growing data warehouses**
  - Supports wide range of needs, 1TB to 320+TB
  - No forklift upgrade eliminates costly, disruptive future upgrades
  - Independent expansion of CPU, memory, and I/O capacity minimizes cost

# Summary

- The SGI® Adaptive Data Warehouse solution helps Oracle customers that need a more capable data warehouse solution
- SGI is bringing its 25 years of expertise in large-scale systems design to data warehouse customers
- The SGI Adaptive Data Warehouse solution offers higher performance, lower TCO, and greater flexibility than other data warehouse offerings
- SGI is joining the Oracle OWI program, expanding the target market for the Oracle Optimized Warehouse Initiative to complex data warehouse customers

  - Overview

**SGI Adaptive Data Warehouse Solution**

The SGI Adaptive Data Warehouse Solution has been optimized for Oracle data warehouses as part of the Oracle Optimized Warehouse Initiative. It allows organizations to conduct highly complex, ad-hoc queries, and supports data warehouses ranging from 5 Terabytes (TB) to more than 300TB. The pre-configured and pre-built SGI Adaptive Data Warehouse Solution integrates SGI Altix servers and SGI InfiniteStorage hardware and software with Oracle Real Application Clusters. It has been validated and tested to deliver optimal performance, and is supported as a single product with a single support contact. The SGI Adaptive Data Warehouse Solution is available in multiple entry points and growth paths to accommodate a wide range of expansion and architecture strategies.

# SGI® Adaptive Data Warehouse Solution

## Scale-Out and Scale-Up

### Scale-Out

- Exploits commodity servers
- Low incremental expansion cost
- Multiple system images
- **High latency communication over cluster interconnect**
  - Interconnect protocol latency
  - Latency between OS instances
- **Low practical node limits based on scaling overhead**

*SGI addresses these issues with InfiniBand*

*SGI addresses these issues with NUMalink scalability from one to thousands of nodes within a single systems architecture*

### Scale-Up

- Proprietary interconnect architecture
- **Proprietary processor architecture**
- **Proprietary operating system**
- **Some architectures have lumpy acquisition costs**
  - (i.e., the 33<sup>rd</sup> processor requires a whole new chassis and backplane)

*SGI addresses these issues with industry-standard Intel processors, Linux, and the scalable NUMalink interconnect*

- Single-system image
- Low-latency shared memory communications between processors
- **Many architects have scaling limits based on high interconnect cost**
- **Large scale-up architectures may have relatively higher system costs due to limited market volume**

# SGI® Adaptive Data Warehouse Solution

## Mid-Range Solution Family

- Scalable reference configuration using building blocks
- Scale-out cluster architecture
- Low-cost x86 industry-standard processors
- InfiniBand interconnect
  - Up to 50% performance improvement for RAC\*
- Multiple storage controllers for high aggregate bandwidth
- Large number of high-speed SAS drives for high storage array throughput

	Mid-Range
Nominal Scalability	1TB to 25TB
Architecture	Scale-out Cluster
RAC Node	SGI Altix XE 250
Processor Interconnect	InfiniBand
Storage	SGI InfiniteStorage 220
Storage Interconnect	Fibre Channel
Disk Family	146GB 15K SAS

# SGI® Adaptive Data Warehouse Solution

## Large Solution Family

- Scalable reference configuration using building blocks
- Scale-up architecture
  - Leverages NUMAflex global shared memory architecture
  - Independent scaling of CPU, memory, and I/O
  - Dual servers for Oracle RAC high availability
- Based on industry-standard processors
- Fully redundant
- Multiple storage controllers for high aggregate bandwidth
- Large number of high-speed SAS drives for high storage array throughput

# SGI® Adaptive Data Warehouse Solution

## *Ultra-Large Solution Family*

- Scalable reference configuration using building blocks
- Scale-up and scale-out cluster architecture
  - Leverages NUMAflex global shared memory architecture
  - Independent scaling of CPU, memory, and I/O
  - Dual servers for Oracle RAC high availability
- Based on industry-standard processors
- Fully redundant
- Very high-performance storage controllers with 16 4Gb FC host channels for high aggregate bandwidth
- Large number of high-speed FC drives for high storage array throughput

	Ultra-Large
Nominal Scalability	100TB to 320+TB
Architecture	Scale-Up and Scale-Out
RAC Node	SGI Altix 4700
Processor Interconnect	Shared Memory/10GB Ethernet
Storage	SGI InfiniteStorage 4600
Storage Interconnect	Fibre Channel
Disk Family	300GB 15K FC
